

# JK blending method in AROME 3D-Var

ENDI KERESTURI, YONG WANG, FLORIAN MEIER, FLORIAN WEIDLE, CHRISTOPH WITTMANN  
ZAMG - ZENTRALANSTALT FÜR METEOROLOGIE UND GEODYNAMIK

# Motivation

- ▶ **Ensemble Jk method (submitted to QJRMS)**
- ▶ **Include large scale information from global model**
  - ▶ Superior data assimilation
  - ▶ Better treatment of larger scales
  - ▶ Guidard and Fischer (2008), Gustafsson et al. (2018)
- ▶ **Mismatching perturbations coming from driving model with those generated by limited area model (LAM)**
  - ▶ LBCs perturbations vs ICs perturbations

# State of the art

## ▶ Digital filter blending method

- ▶ Brožková et al. (2001), Bučanek and Broškova (2017)
- ▶ Low-pass digital filter -> blend a large-scale analysis with small scales of LAM
- ▶ ALADIN-LAEF

## ▶ Include global model information directly into limited area variational assimilation

- ▶ *Jk* blending method
- ▶ Proposed by Guidard and Fischer (2008)
- ▶ Adopted to HIRLAM by Dahlgren and Gustafsson (2012)

# Theoretical background – $J_k$ 3DVAR

## ► Cost function:

$$J(x) = \underbrace{\frac{1}{2}(x - x_b)^T B^{-1}(x - x_b)}_{J_b} + \underbrace{\frac{1}{2}(y - Hx)^T R^{-1}(y - Hx)}_{J_o}$$

## ► Cost function in $J_k$ blending method

$$J(x) = J_b + J_o + \underbrace{\frac{1}{2}(x - x_{ls})^T V^{-1}(x - x_{ls})}_{J_k} = J_b + J_o + J_k$$

# Model setup

- ▶ **LAM: AROME model (2.5L90) cy40**
  - ▶ ZAMG's operational configuration
  - ▶ **3D-Var** - Conventional observations (AMDAR, SYNOP, PILOT, TEMP, SHIP, EUROPROFILERS) plus GEOWIND and ASCAT
  - ▶ ZAMG's operational B-matrix
  - ▶ 6-h continuous assimilation cycles
- ▶ **Driving model: ECMWF EPS control (18L91)**

# Jk configuration

## ▶ Namelist switches

- ▶ LEJK = TRUE # main Jk switch
- ▶ ALPHAKT ~ 1 # amplification factor for Jk temperature term
- ▶ ALPHAKVOR ~ 1 # amplification factor for Jk vorticity term
- ▶ ALPHAKDIV ~ 0.1 # amplification factor for Jk divergence term
- ▶ ALPHAKQ ~ 0.01 # amplification factor for Jk humidity term
- ▶ ALPHAKP = 1 # amplification factor for Jk pressure term
- ▶ PRESINFJK = 100500 # Jk activated above pressure level
- ▶ PRESUPJK = 98000 # Jk fully active above pressure level

# Humidity problem

- ▶ **Jk code was written for ALADIN (humidity is spectral)**
  - ▶ Gridpoint humidity in AROME
  - ▶ Humidity gp -> sp (Epygram)
  - ▶ LSPRT = FALSE

# V-matrix calculation

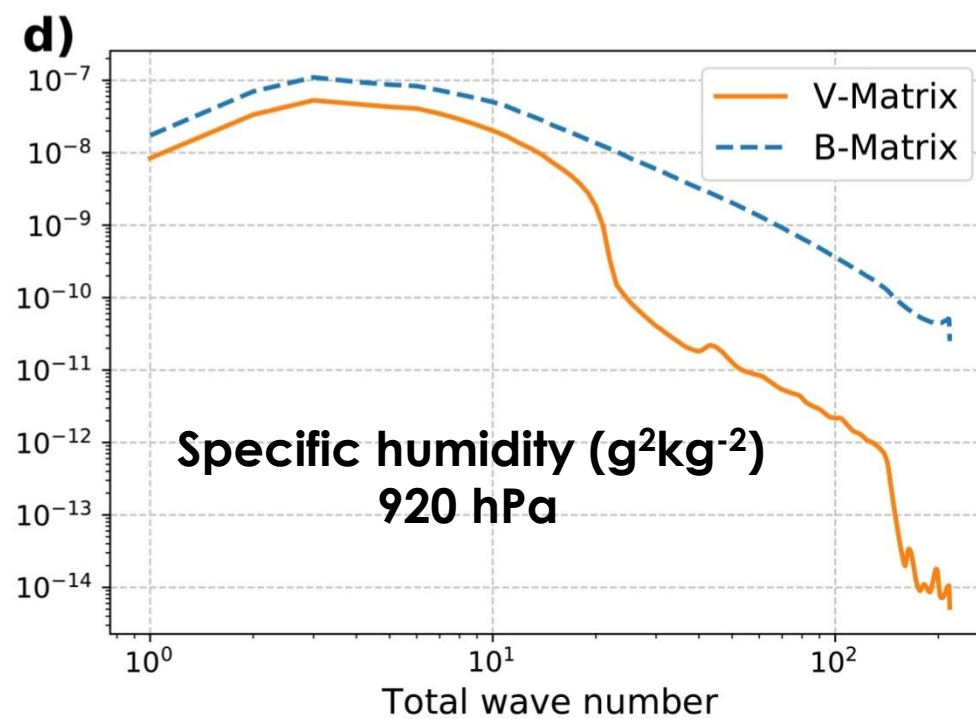

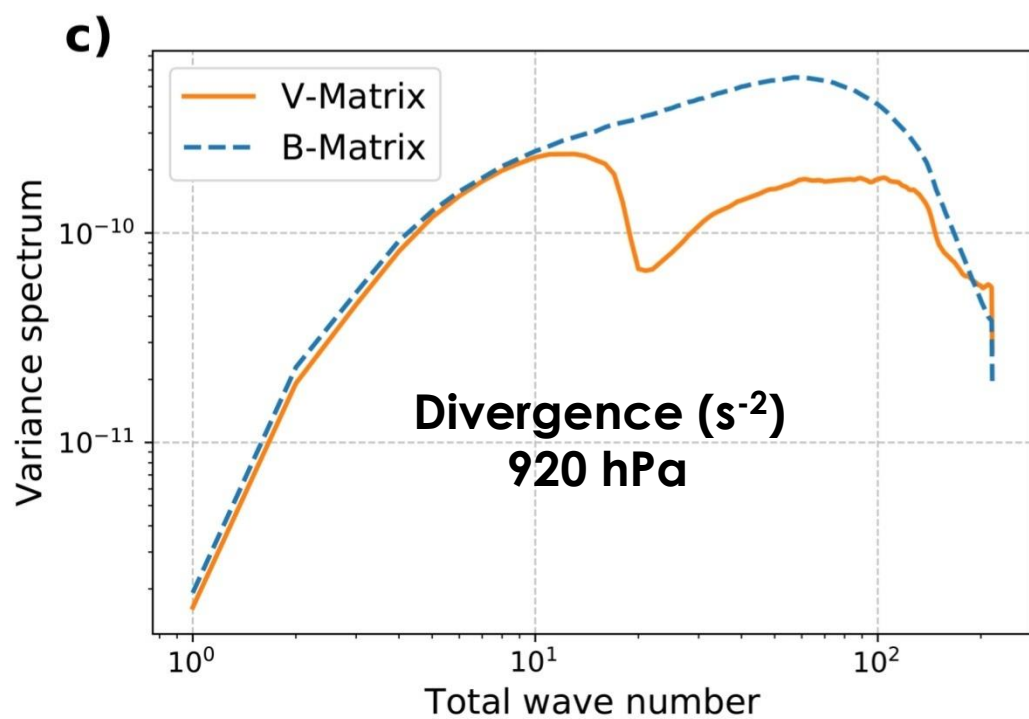

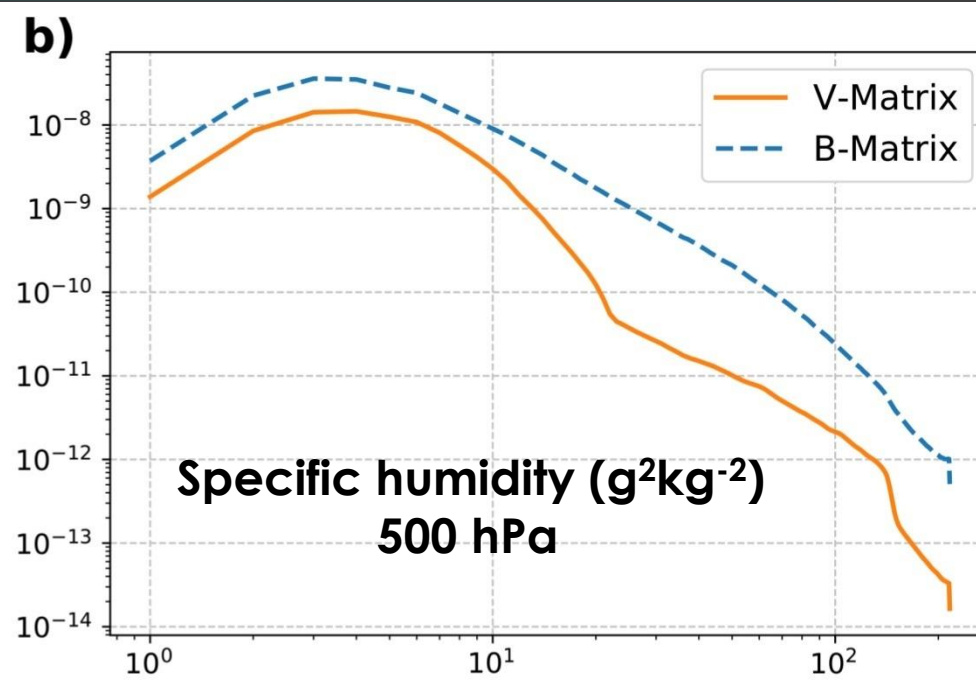

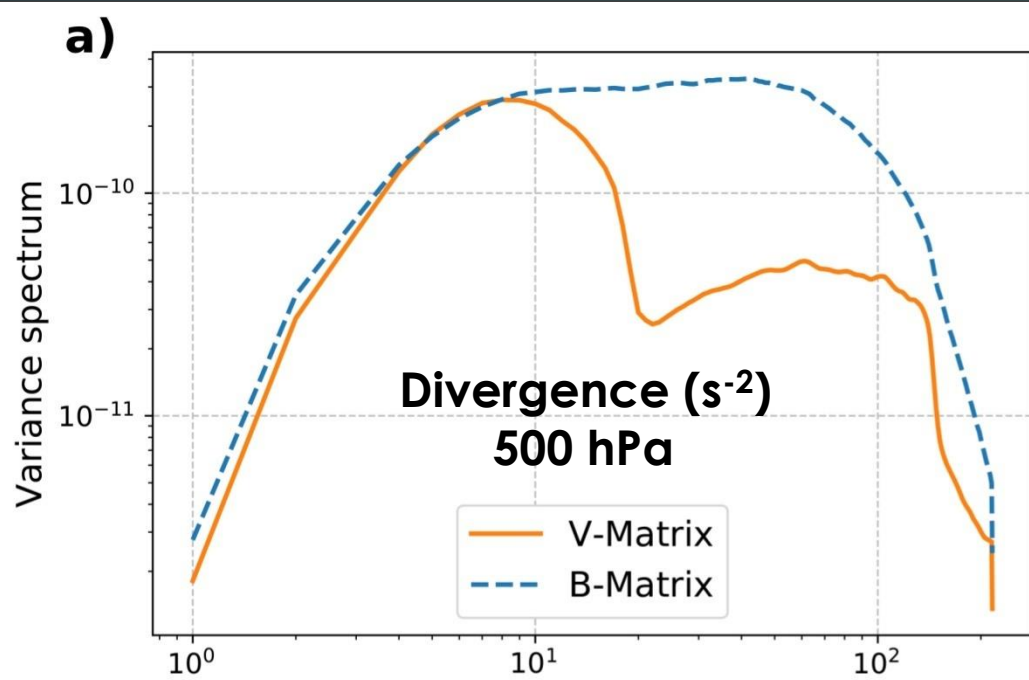

- ▶ **Ensemble method**
- ▶ **16 ECMWF EPS members (analysis)**
  - ▶ Interpolated to AROME domain
- ▶ **Two times per day (00 and 12 UTC) for two weeks in January, April, July and October**
  - ▶ Annual variability
- ▶ **Total of 896 differences**
- ▶ **Univariate formulation**

# Scale selection

## ▶ Truncation of $J_k$ term

- ▶ Wave number for which horizontal error variance spectra, between LAM and global model, starts to diverge
- ▶  $NTRUNCJK = 8 \sim 135$  km

# Conclusion

- ▶ Global model information included into convection permitting ensemble 3DVAR
- ▶ Positive impact on upper air variables
- ▶ Positive impact on surface pressure and precipitation
- ▶ Improved model performance in some situations
- ▶ Future plans
  - ▶ Test Jk in ALADIN/HR
    - ▶ Deterministic environment
