

Data assimilation work in Hungary

Kristóf Szanyi, Gabriella Tóth, Helga Tóth, Zsófia Kocsis, **Viktória Homonnai**

ARSO METEO
Slovenia

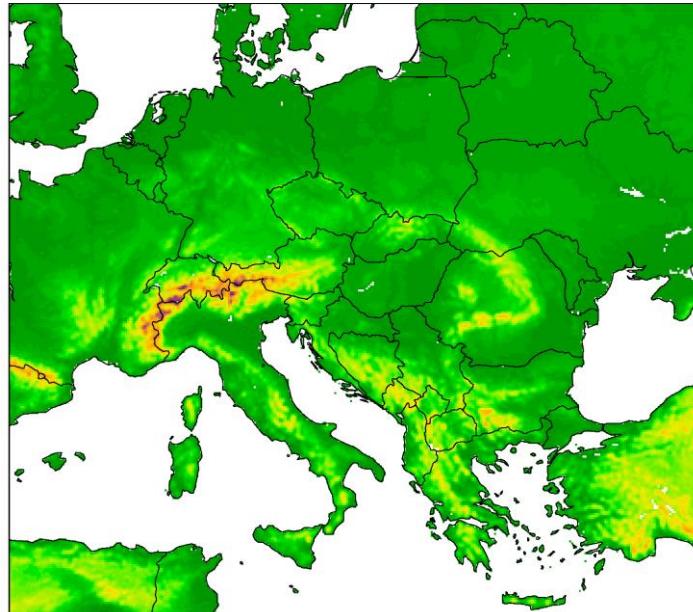

Outline

- ▶ Status of operational DA systems
- ▶ Implementation of cy43t2_bfl0
- ▶ AROME RUC experiments
- ▶ Maintenance of the observation monitoring system
- ▶ B-matrix recalculation for 90 levels
- ▶ New observations:
 - ▶ Mode-S MRAR data – Czech and Hungarian data (see Kristóf's talk)
 - ▶ HRW AMV
- ▶ Surface assimilation:
 - ▶ SEKF studies (see Helga's talk)

Operational NWP and DA systems

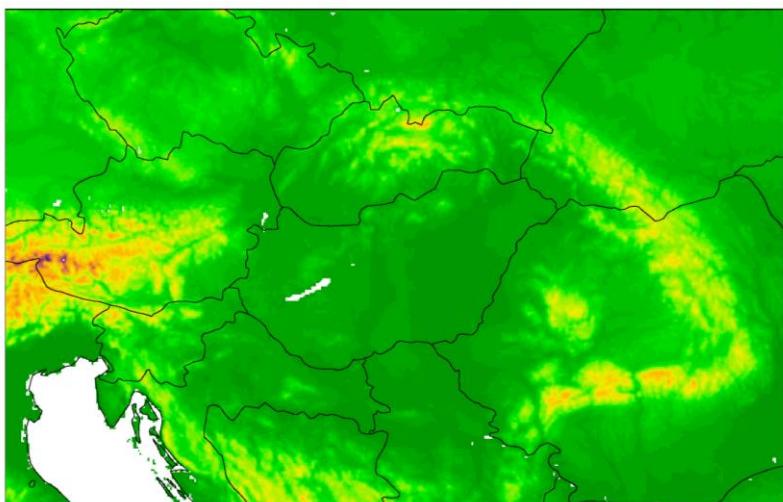

▶ ALARO

- ▶ 8km horizontal resolution/49 vertical levels
- ▶ 300s timestep
- ▶ cy40t1_bf05
- ▶ SMS environment
- ▶ 4 runs/day up to 60/48/60/36 hours
- ▶ Coupled to IFS global
 - ▶ 3-hourly frequency
 - ▶ Time-lagged coupling for forecast
 - ▶ Direct coupling for DA cycle

▶ AROME

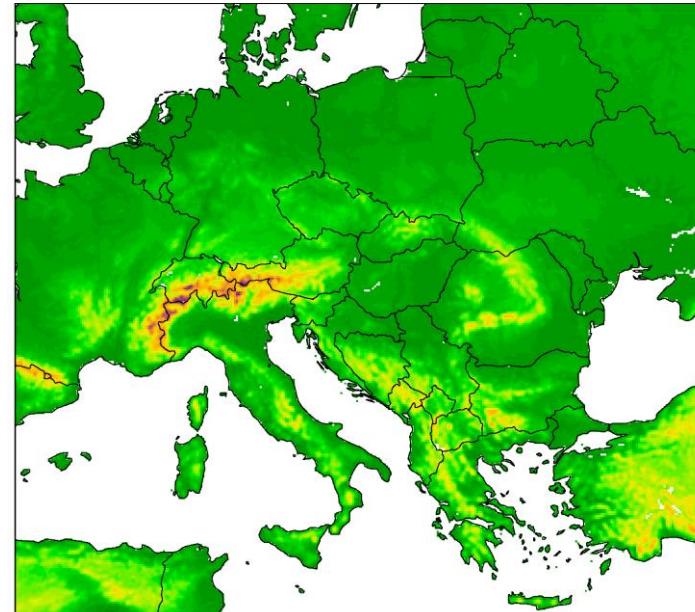

- ▶ 2.5km horizontal resolution/60 vertical levels
- ▶ 60s timestep
- ▶ cy40t1_bf05
- ▶ SMS environment
- ▶ 8 runs/day up to 48/36 hours
- ▶ Coupled to IFS global
 - ▶ 1-hourly frequency
 - ▶ Time-lagged coupling for forecast
 - ▶ Mixed coupling in DA cycle

Operational NWP and DA systems

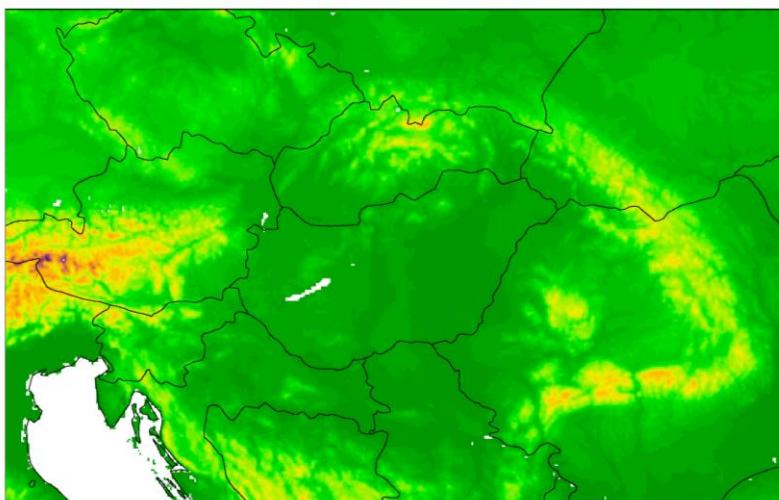

▶ ALARO

- ▶ With digital filter initialization
- ▶ 3DVAR + CANARI
- ▶ 6-hour DA cycle
- ▶ Observations: SYNOP, AMDAR, TEMP, SEVIRI, Geowind AMV, NOAA-18 AMSU-A, MHS
- ▶ ALADIN EDA B-matrix

▶ AROME

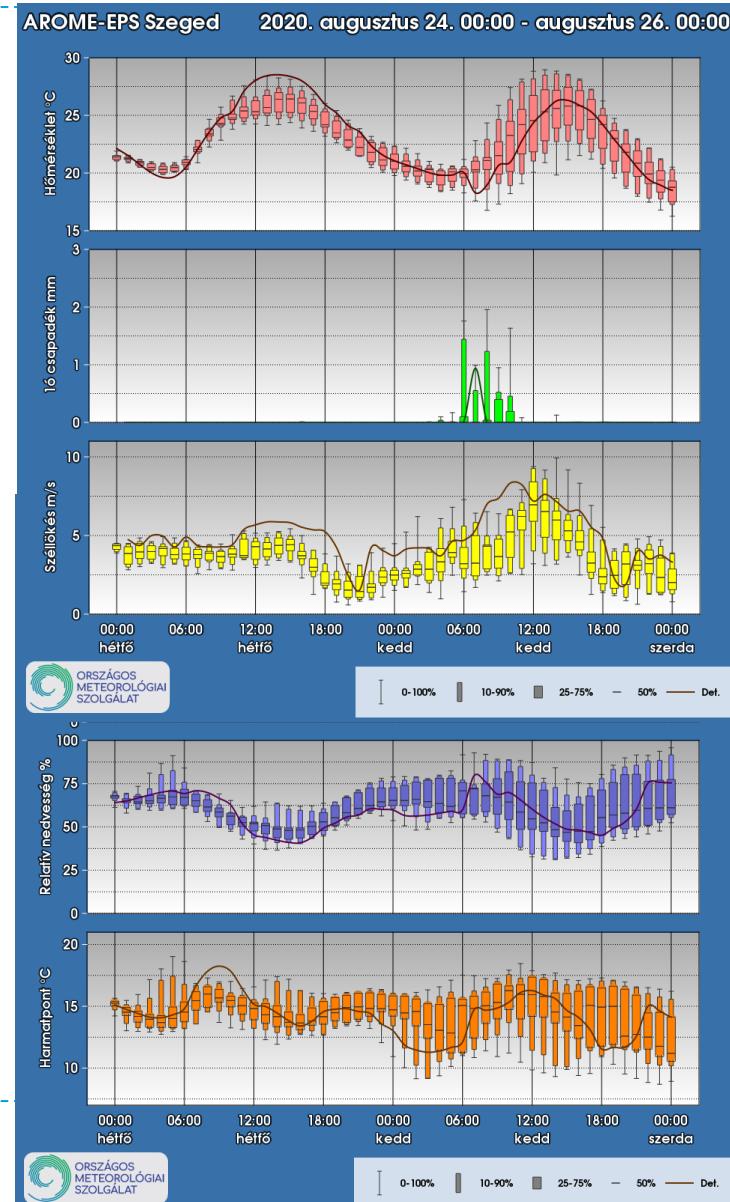

- ▶ Without digital filter initialization
- ▶ 3DVAR + OI_main
- ▶ 3-hour DA cycle
- ▶ Observations: SYNOP, AMDAR, TEMP, GNSS-ZTD, Slovenian Mode-S MRAR
- ▶ AROME EDA B-matrix

Operational NWP and DA systems

► AROME-EPS (from February 2020)

- ▶ 11 members
- ▶ 2.5km horizontal resolution
- ▶ 60 vertical levels
- ▶ cy40t1_bf05
- ▶ SMS environment
- ▶ 1 runs/day up to 48 hours
- ▶ Coupled to IFS global
 - ▶ 3-hourly frequency
- ▶ No data assimilation
- ▶ Initial conditions:
 - ▶ ECM-ENS +AROME-det. surface

Implementation of cy43t2_bf10

- ▶ cy40: $N_{\text{active}} + N_{\text{rejected}} = N_{\text{total}}$; $N_{\text{rejected}} > N_{\text{blacklisted}}$
- ▶ cy43: ? N_{rejected} smaller ; $N_{\text{active}} + N_{\text{rejected}} + N_{\text{blacklisted}} \neq N_{\text{total}}$

AROME RUC experiments

Conclusions:

- ▶ one-hour upper DA cycle + three-hour surface DA cycle
- ▶ cut-off time:
-45/+15 min

AROME_1hourly_surf3
 — -30/+30 min cut-off time
 — -45/+15 min cut-off time

- AROME_3hourly
 — AROME_1hourly
 — AROME_1hourly_surf3
 — AROME_1hourly_surf6

Maintenance of the observation monitoring system

- ▶ It is working since 2005, mainly for ALADIN → outdated
- ▶ Implementation of new observations which used only in AROME → batch mode and web interface as well

Maintenance of the observation monitoring system

- ▶ Implementation of new observations:
 - ▶ AMDAR humidity (used only in AROME)
 - ▶ GNSS ZTD (used only in AROME)
- ▶ monthly report for AROME
- ▶ additional effects:
 - ▶ missing TEMP from Austria (data arrives only in BUFR)
 - ▶ monitor of AMDAR due to COVID-19
 - ▶ wrong blacklist settings for AMV

B-matrix recalculation for 90 levels

- ▶ There were instabilities with 60-levels AROME → we would like to change to 90-levels with different model top.
- ▶ downscaled EDA → spinup B-matrix → full EDA → EDA B-matrix
- ▶ experiments on a longer period
- ▶ tuning of **B** and **R** is needed
- ▶ Desroziers et al. (2005) → REDNMC = 1.26
SIGMA_COEF = 0.71 → deterioration

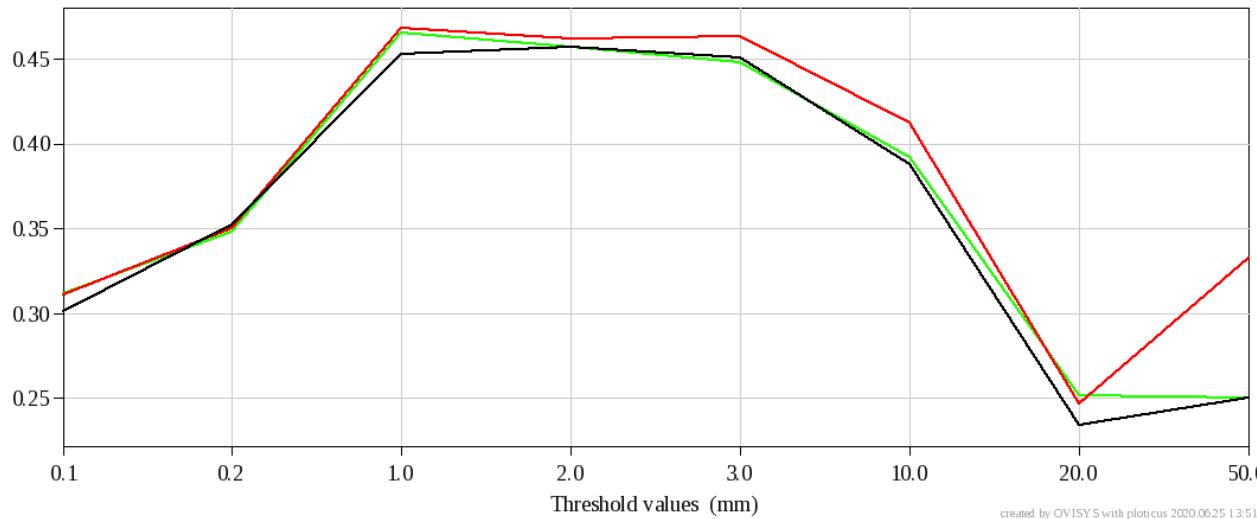

New observations: Czech and Hungarian Mode-S MRAR data

- ▶ Czech data with whitelist see Kristóf's talk
- ▶ Hungarian data without whitelist in the first experiment

Period: 12/01/2019 - 12/19/2019
Area: AROME_max_400m
Variable: Precipitation (24 hour sum)
Timestep: 024
Score: ETS
Runhour: 12

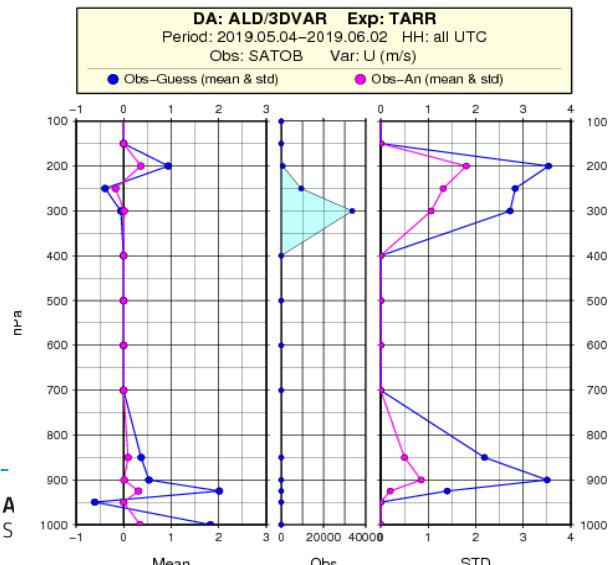

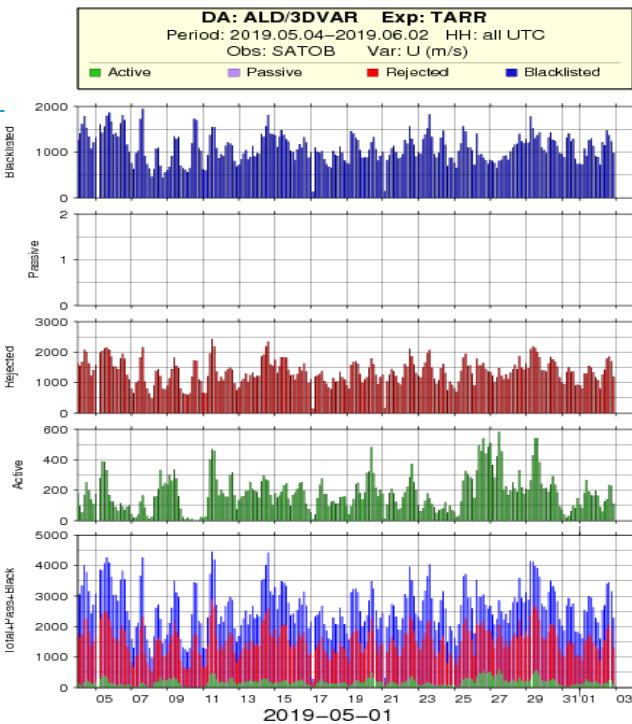

— REF
— CZ MRAR
— HUN MRAR

— AROME_20191201
— AROME_mode-s_cz
— AROME_MODE_S_mrar

New observations: HRW AMV

- ▶ geowind is operational in ALADIN
- ▶ experiments with geowind and hrwind in AROME
- ▶ Two different periods:
 - ▶ spring period with large-scale precipitation
 - ▶ summer period with deep convection
- ▶ mainly neutral impact during both periods
- ▶ most of the measurements are blacklisted
- ▶ Future plan:
 - ▶ winter period
 - ▶ revise the blacklisting setup

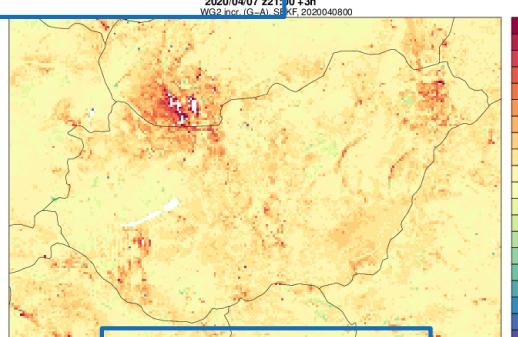

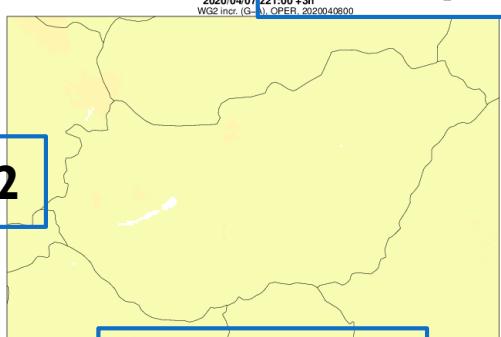

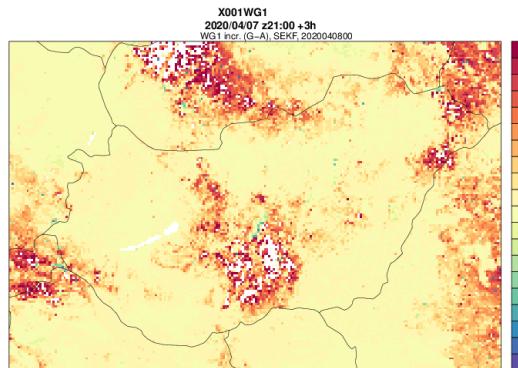

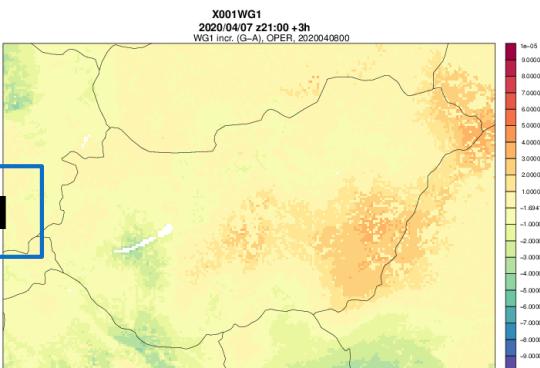

Surface assimilation: SEKF studies

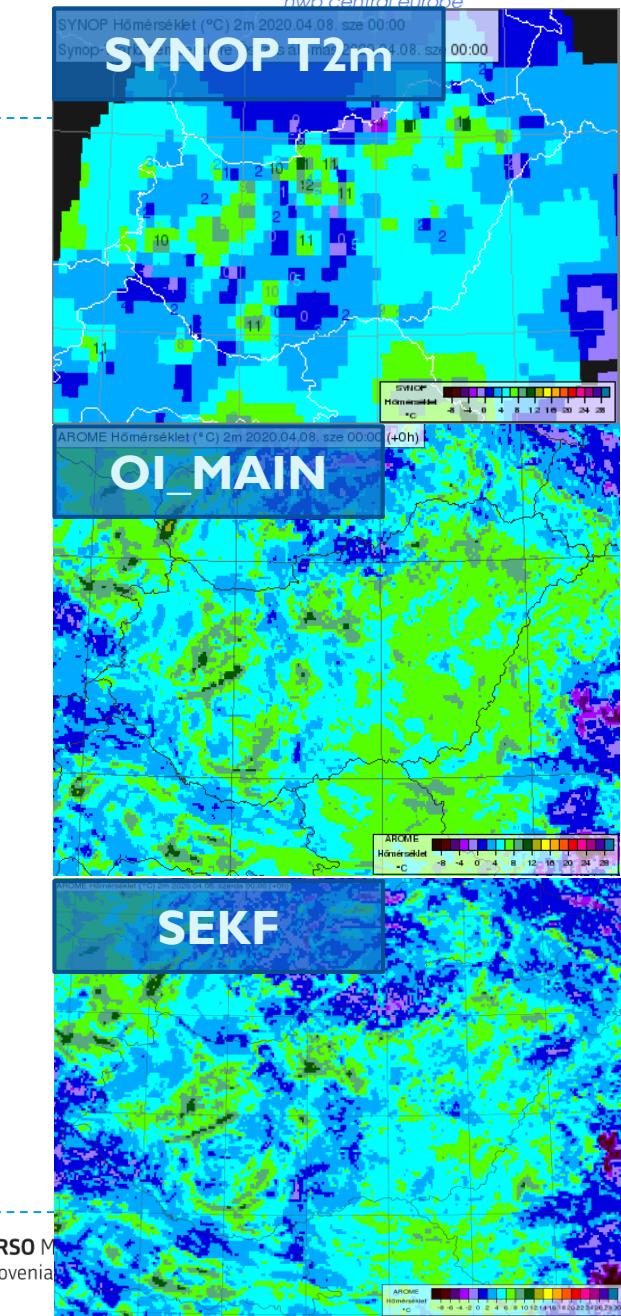

see Helga's talk

LACE
nwpc central europe

- ▶ 8th April 2020 00UTC – dry and warm case →
- ▶ minimum temperature is usually overestimated
- ▶ Soil moisture increments are usually bigger with SEKF than with OI_main (operational)

SEKF

Plans for 2021

- ▶ Large project: AROME Nowcasting system with 1-hour RUC on 1.3 km horizontal resolution and 90 vertical levels → new supercomputer
- ▶ cy40t1 → cy43t2 in the operational AROME runs (ALADIN will not be updated any more)
fullpos on lat-lon grid → new climate files are necessary
- ▶ Start to work on radar assimilation
- ▶ B-matrix calculation
- ▶ HRW AMV and Hungarian Mode-S MRAR → operational
- ▶ Further experiments with SEKF
