

Implementation and validation of OI analysis in a coupled ALARO/SURFEX system

Anamarija Zajec
Host: Matjaž Ličar (ARSO)

Introduction

- the aim - conduct a short cycled experiment in ALARO coupled with SURFEX
 - compare evolution of surface fields (SURFEX and ISBA)
- A one week run with ALARO/SURFEX was performed, and the results were compared to the operational ALARO (cy43t2)

About model

- Domain 589x589
- 1 km resolution
- 1 h RUC
- first guess for start of experiment was from operational
- For .sfx file is made dynamic adaptation (preplbc) from ELSCF file and after that is cycled upper air and surfex fields
- In canari - change of namelist
- ICMSHANALINIT.sfx – guess, ICMSHANAL+0000.sfx with this file integration doesn't work good

- After canari the SFX.SST field in ICM SHANAL+0000.sfx appears to be erroneous
- This leads to a segmentation fault after one time step

- With `copy_to_fp.py` we rewrite fields from `ICMSHANAL+0000.sfx` in `PFE927SI13.sfx`
- There are NaNs appearing in `surfex/SURFEX/drag.F90` when PPS and PQA variables are read
- Replacing `SFX.SST` with the SST field from `PFE927SI13+0000.sfx` using `epygram` produces the same problem
- Replacing the following ISBA fields: `"SFX.TS_WATER"`, `"X001TG1"`, `"X001TG2"`, `"X001WG1"`, `"X001WG2"`, `"X001WG3"`, `"X001WGI1"`, `"X001WGI2"`, `"X001WSN_VEG1"`, `"X001RSN_VEG1"`, `"X001ASN_VEG"` in `PFE927SI13+0000.sfx` with the fields from `ICMSHANAL+0000.sfx` once canari concludes resolves the issue

Modifications in scripts

- There were made some changes in scripts for canari, integration and copy to fp
- canari

-1.4.2024. 17 UTC

-radar plot

-the operational forecast of rain

-forecast of rain with SURFEX

Conclusion

- An assimilation cycle using ALARO coupled with SURFEX was conducted, and the evolution of surface fields was compared between SURFEX and ISBA
- The fields SURFTEMPERATURE and X001TG1 were found to be close to each other, and CLSTEMPERATURE was the same as SFX.T2M
- A one-week run with ALARO/SURFEX was performed, and the results showed that the operational model performed better
- With further tuning, we could achieve better results, potentially leading to improved forecast
